# 6000 S characteristics

Due to our continuous improvements the Dry Ice Jet 6000 series is more efficient and of higher quality than conventional dry ice blasting machines.

## Quality

The stainless steel case guarantees reliability and a long term of use.

## Control panel

The simple and customer friendly control panel guarantees easy adjustments of the blasting parameter.

## Safety instructions

The safety instructions prevent risks due to a misuse of the machine.

## Dry Ice inlet and Air outlet

The air inlet is on the backside of the machine and the ice putlet at the frontside.

## Control port

The control ports enables to manually control the blasting gun.

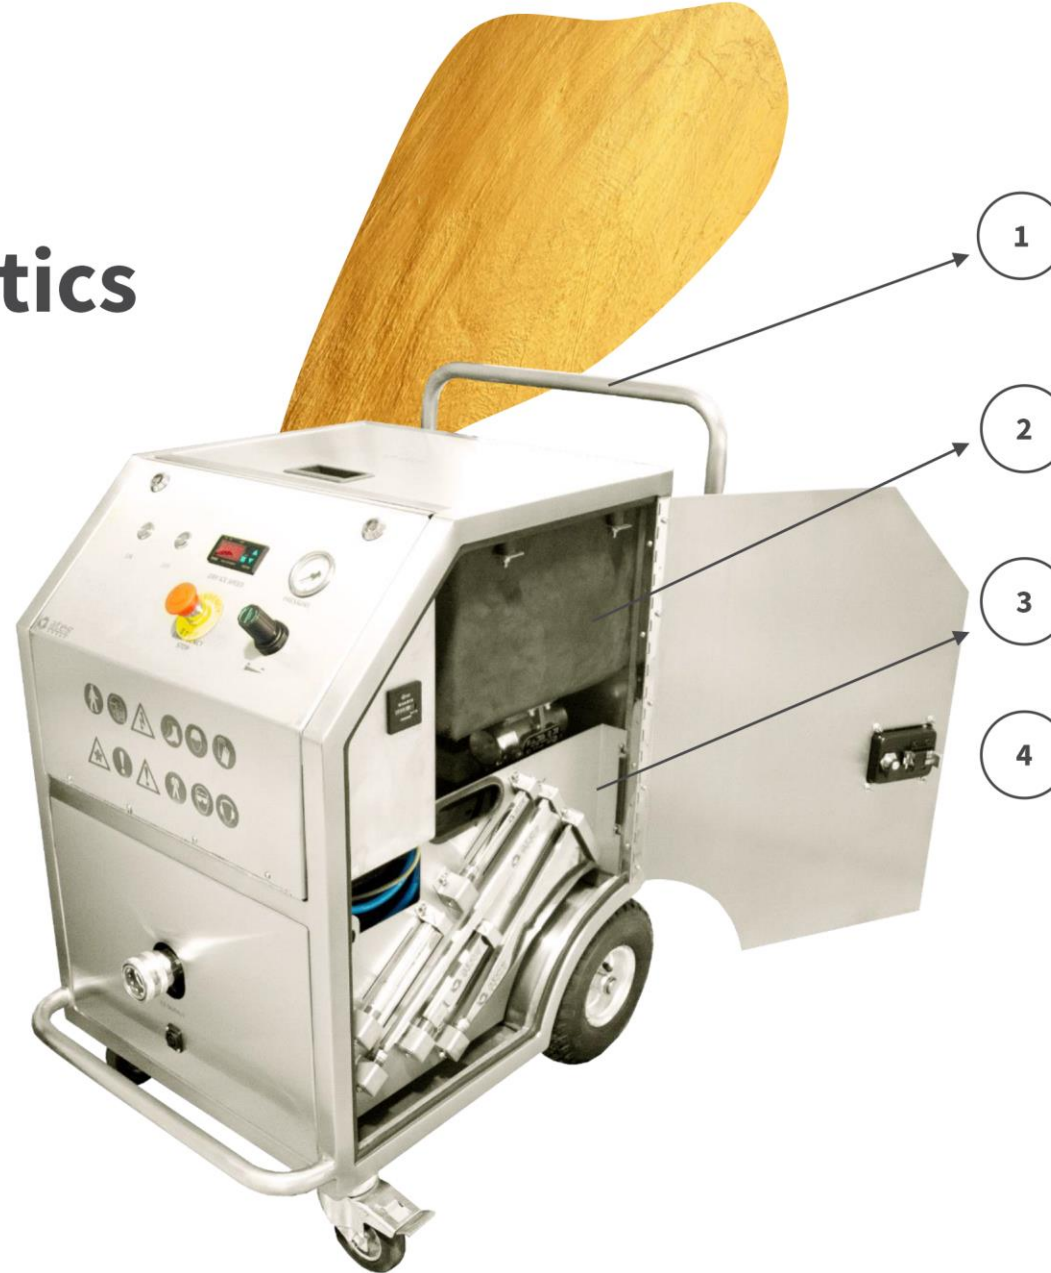

## Lockable wheels

The lockable wheels secure the blasting process.

# 6000 S characteristics

Due to its well thought-out design all the different blasting nozzles can be stored inside the machine housing to minimize the risk of loss and save space.

## 1 Blasting hose mounting

The hose mounting guarantees an easy transport and use.

## 2 Insulated funnel

The insulated funnel guarantees the minimal dry ice sublimation and an efficient use.

## 3 Built-in nozzle-set

The built-in set of nozzles is space saving and guarantees an easy handling.

## 4 The nozzle-set

The set of five different nozzles enables to adjust the best blasting parameter.

# 6000 S characteristics

The simple assembly and versatile use are the main characteristics of the 6000s dry ice blasting gun. The easy handling guarantees safe and efficient work.

## Assembly of the nozzles

The simple removal and assembly of the different nozzles guarantees time saving and efficient work.

## Trigger

The trigger enables to manually start and control the dry ice blasting machine.

## Locking button

The locking button enables to switch to continuous operation.

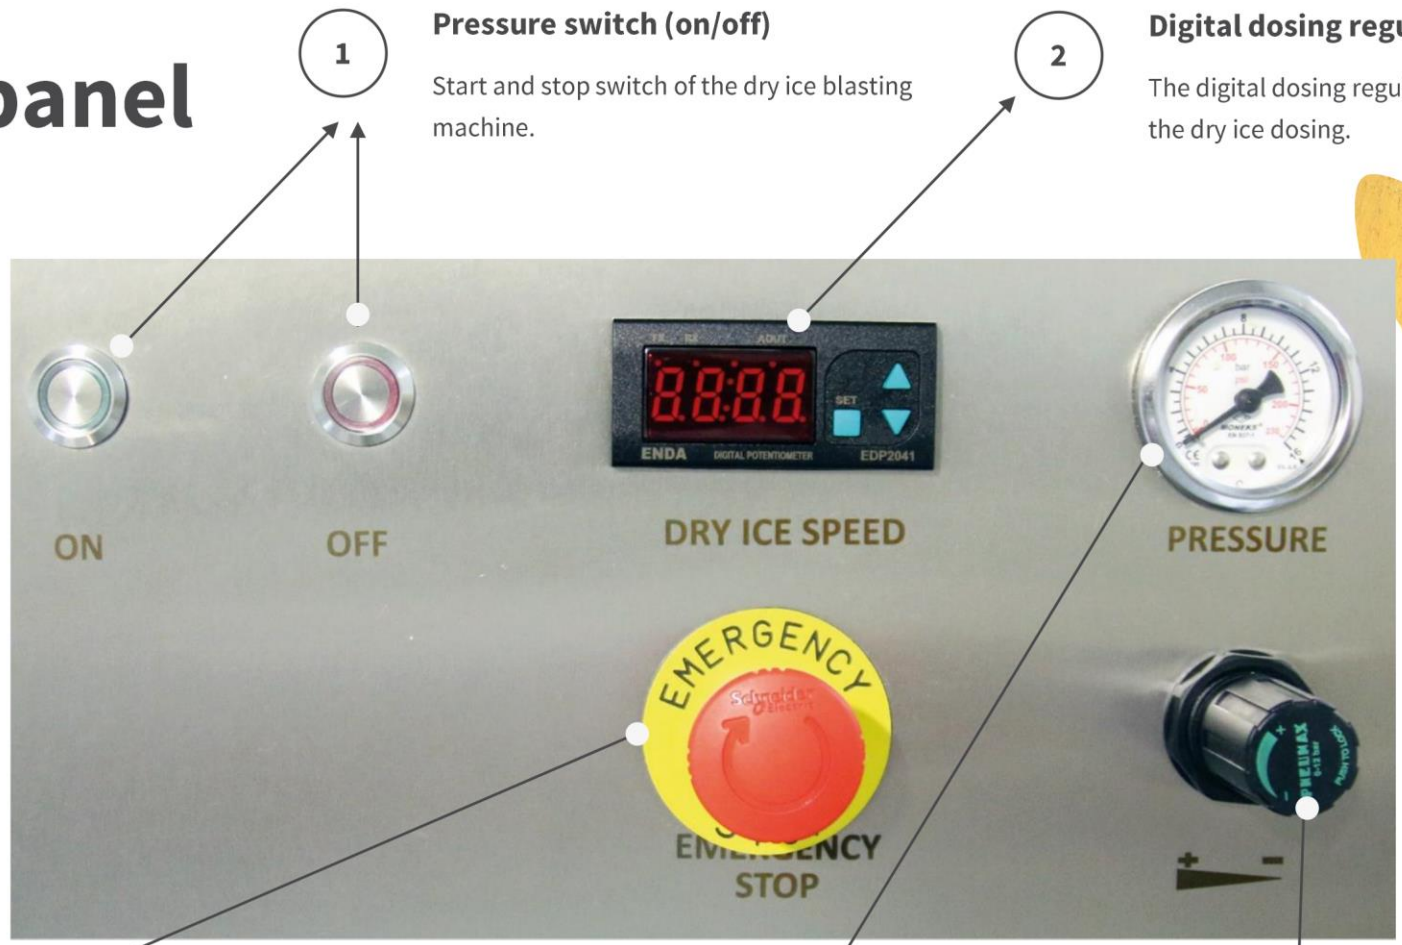

## Control connection

The quick release closure guarantees the simple and fast connection/disconnection.

# 6000s control panel

The improved control panel of the 6000 series guarantees the simple and safe use of the blasting machine.

1

**Pressure switch (on/off)**  
Start and stop switch of the dry ice blasting machine.

2

**Digital dosing regulator**  
The digital dosing regulator enables to adjust the dry ice dosing.

3

**Emergency stop**  
The emergency stop switch enables to shut down the machine in emergency situations.

4

**Pressure Display**  
The pressure display shows the operating pressure of the blasting machine.

5

**Pressure regulator**  
The pressure regulator enables to adjust the quantity and speed of the compressed air.

# 6000 SERIES DRY ICE JET
